***Response to Amendment***

Applicant's arguments filed November 28, 2003, have been fully considered but they are not deemed to be persuasive.

Applicant argues that Devier et al does not compare actual pump flow to the requested pump flow to determine the relationship between the valve command and the operator input. Applicant is mistaken. Devier et al clearly indicates that the comparison is used (column 5 line 47-51) to adjust flow to each work element; with the valve command (i.e. stem displacement) "reduced proportionally to the assigned priority values (column 5 line 56).

Applicant argues that Cobo et al teaches a system for determining a valve command resulting in a consistent deadband, thereby teaching away from providing various actuator responses with respect to the operator input. Applicant is mistaken. Cobo et al clearly indicates that the valve command is given to generate a consistent deadband (figure 4, comparison of 308 and 310); but the adjusted valve command (402) will result in an actuator response, which is different from the response with a different pump speed. Since there is an offset for the valve command, this offset means that the full open position for the valve is at a lower joystick position. For a position of the joystick being larger than this lower "open" position, there will be no increase in actuator speed, whereas for the higher pump speed, there will be an increase in actuator speed.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

***Claim Rejections - 35 USC § 102***

Claims 1, 2, 5, 7-14, and 16-22 are rejected under 35 U.S.C. § 102(b) as being clearly anticipated by Devier et al. Note that the rotational speed of the pump ( $\omega$ ) is used to generate the actual pump flow ( $Q$ ) and the actual pump flow ( $Q$ ) is compared to the requested pump flow to determine the relationship between the valve command and the operator input (discussed e.g. column 5 line 1-68).

Claims 1-4, 6-15, 17-19 and 22 are rejected under 35 U.S.C. § 102(f) as being clearly anticipated by Cobo et al (6,305,162). It would appear that the sole inventor of the instant application is not the inventor of the subject matter of the above claims; since the sole inventor of the instant application is not listed as one of the inventors of Cobo et al, even though both are owned by Caterpillar; and the limitations of the above claims are disclosed in Cabo et al.

### **Conclusion**

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
